

Our topic in Year 5 is space, so we went to @Bristol to learn more about it. We went to exhibits to explore and it was so much fun! There were massive bubbles and we went inside of them. In the biology part, you could

experience what it was like as a baby in the mother's stomach. There was also a cool shadow freezer where you do a pose and it freezes your shadow! And there was a weird, tilted room where the ball went upwards, it

was really strange but amazing at the exact same time!

After that we went down stairs. We went in a huge hamster wheel (made for humans only) that powered a colossal water thing that was showing you what a dam was like. Another exciting thing was an air cannon! Basically, it was a large cannon full of air in it that held up the Earth that was a small ball, but everyone just put their heads in it! Then at the end we bit a straw and put our fingers in our ears and it made music! Finally, we went back to school.
