

@BRISTOL THE BEST TRIP EVER

After lunch we went exploring.

All of the exhibits were incredible. Immediately, we went to look amazing liquid metal exhibit which showed us an awesome experiment that had liquid

metal and a strong magnet which when we moved the magnet around it was just epic!

Next, we headed to a strange looking exhibit. It had two long bendy poles and a big, blue button. When we pressed it a thin wave of electricity ran up them. It was so cool and shocking that Mrs Hardy even took our photo.

After that we headed downstairs.

We saw a giant piece of equipment standing in front of us. It looked like a giant hamster wheel. However, there was a long queue in front of it! As soon as we got on it felt we were all massive hamsters in our cage.

Then we went over to the biology area. There was a huge dome with squishy padding all around it. It represented a woman's womb and you could experience all the noises and feelings like a baby. We felt like a baby.
